# Market Rundup: Squeeze still on for feed-price margins

**WHAT'S AHEAD FOR RANCHING,** feeding and the cattle business in 1981? While it is extremely difficult to anticipate the impact of a new administration and Congress, it is likely that stockman will see continued inflationary pressures, perhaps slowing in the latter half of 1981.

Interest rates that will be high in the beginning of the year will perhaps slacken as inflation rates moderate; relatively modest increases in disposable personal income and GNP should strengthen the economy the latter part of 1981.

Increased feed costs will likely continue to squeeze livestock feed-price relationships, despite possible higher livestock prices. This will moderate the rate of increase in feed use production, which many analysts anticipate for 1981. Increased non-feed kill may also help moderate price rises for hamburger and processing meals.

## Navajo cattle hit with scabies ills

About 10,000 to 15,000 head of cattle on a Navajo Indian reservation in northwestern New Mexico may be infected with papropic scabies, a disease that prevents cattle from gaining weight, the USDA said, according to CNS.

USDA is working with representatives of the Navajo nation and New Mexico officials to eradicate the disease, the agency said. All infected or exposed herds will be placed under quarantine until they are declared free of the scabies mite.

State and federal officials also are checking shipping records of cattle that may have been exposed to the disease, USDA said.

Noted veterinarian William H. Hays, DVM, said that the disease is caused by a mite that is common in the area.
